

PASSION FOR COATINGS

Quinta Metalica is mainly a **TEAM** created over ten years ago and it is specialized in metallic cladding and roofing architecture.

"It is nonsense to create a company that does not integrate the **COMMITMENT** in its DNA" with such a foundational principle, everything is based on a **SERVICE** that has as main goal the customer's satisfaction.

Our customer needs a brand to feel at ease and that defends **VALUES** to be identified with: creativity and innovation, quality, honesty, professional ethic, loyalty, sustainability, commitment, responsibility .

Our team consists of more than twenty people with different experiences, with different nationalities and training, from architects to financial experts, designers and tinsmith craftsmen.

We all subscribe the same ethical code, the commitment of an aim that wins and convinces:

The application of our values in our daily work management.

In the same way, the **MATERIALS** have to fulfill a maxim whatever the **PROJECT CATEGORY** is: Individual or standardized clothing.

High fashion

Prêt à Porter

They all reply to the highest environmental requirements, benefit from a very longlasting life by means of auto protection when they get in touch with the surrounding atmosphere and require no maintenance.

We use 5 of the 118 elements that generate the wealth and diversity of the earth:

TITANIUM	COPPER	ZINC	IRON	GOLD
Ti	Cu	Zn	Fe	Au

The expressive strenght and the constructive potential of materials have neither limits nor barriers to our creative need, to our customer's demands, everyday in evolution.

High fashion

When we started our project, the hallmark of our proposal did not depend on any high industrial technology.

The "tailor - made" became our brand in an unique proposal, in an innovative claim.

Exclusive architectural garments, tailor - made by requirement of our costumer, developed, made and assembled by hand from start to finish by experienced professionals with high quality materials that are unusual in their application.

The costumer can choose the design, the material, the colour,... We attend the request and clothe the detail.

EXCLUSIVITY IN DETAIL

Prêt à Porter

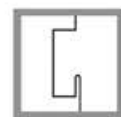

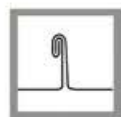

Becoming an industry is another foundational commitment and probably the biggest challenge we face up:
To make attainable our ideas to all without losing their original essence.

The team commitment with our values allowed us to develop architectural, modular, prefabricated, innovative and cutting-edge systems that preserve our identity and exalt the metallic applications in architecture.

From houses to airports, from museums to nursery schools, from jobs centers to religious workshop centers,... we participate in developing the cities.

Our material, the same: noble, with the highest quality and environmentally eco-friendly.
